PREFACE

The profitable agricultural production in Upper Austria is based on well supplied soil and excellent water quality. It is quite challenging for the agricultural cultivation to protect soil and water; and at the same time, be competitive.

The *Boden.Wasser.Schutz.Beratung* works on behalf of the Upper Austrian government. Not only does it support farmers in terms of soil conservation but it also protects the surface / ground water and plants in a water friendly way.

We hope that the offers of the *Boden.Wasser.Schutz.Beratung* continue to be of interest, so that we can contribute to the protection of our soil and water.

The comprehensive soil and water protection is the foremost aim in Upper Austria.

AIMS

objectives of the *Boden.Wasser.Schutz.Beratung* (consulting for soil- and water protection)

reduction of substances in the surface water caused by erosion

reduction of the nitrate pollution in the ground water

reduction of nutrient pollution in the surface water

reduction of the pesticide contamination in surface and ground water

securing a sustainable supply of drinking water

sustainable soil protection

CONSULTING

The proven three-stages approach of the consulting

The *Boden.Wasser.Schutz* consultant establishes and supervises a working group of farmers.

The *Boden.Wasser.Schutz* consultant cooperates with qualified and trained farmers called *Wasserbauern*, who are the heads of the working groups.

The *Wasserbauern* act as multipliers to the working group members and communicate their and the specialized know-how of the *Boden.Wasser.Schutz.Beratung*.

Consulting possibilities in different regions of Upper Austria

Farmers can contact the respective *Boden.Wasser.Schutz* consultant to arrange an appointment for personal consulting.
